

# MICROKIT CULTURE MEDIA

MICROKIT culture media are manufactured according to ISO 9001 and ISO 11133-1, following the guidelines of GMP-NCF (ISO15378) and are monitored using ISO 11133-2:

-  Almost 300 Dehydrated Media: in 500 g, 100 g bottles, 5 Kg drums or big tubes with pre-weighed quantity sufficient to make 225-500 ml
-  More than 350 Ready-to-use Media: plates, hermetic small plates, contact plates, tubes, bottles, big bottles, ISO bottles and vials-ampoules.

Moreover, in **MICROKIT** we can tailor-make media according to your requirements as dehydrated or ready-to use media

-  We can offer mini-pilot scale batches (testimonial minimum order) or large batches to unify many containers in one only batch.
-  We produce classic media and also modern chromogenic media.
-  We make media that appear in ISO where we are the sole manufacturers.
-  We offer media that appear in other official requirements, or your in-house company media.
-  Other formulations, confidential (with confidentiality agreement), or published can be produced by us.
-  We cater for specific developments of media for utilities that your lab needs.

We were the pioneers in space-saving storage by designing the first square bottles in 1989. Previously, all dehydrated media bottles were round, which wasted a lot of space in all laboratories' stores worldwide.

 Dehydrated media provide the laboratory with production flexibility and are more economical.

 With ready-to-use media you will save time and work. Win in comfort, to save the task of weighing, heating, dissolving, adjusting the pH, autoclaving and dispensing dehydrated culture media, and checking that each lot you prepared has suitable quality, productivity and selectivity.

With inoculation to allow for melt inclusion or depth, we have designed our own solutions in ready-to-use media: before 1989 there were no tubes with 18 ml of agar: these were developed by MICROKIT.

We pioneered the design of both chromogenic media broth (with our chromogenic P/A kits for water, 1994 and our broth-RAPIDTEST chromogenic TSB, 1995) and agar (our MUGPLUS Agar for E.coli and other coliforms, 1995 ), media now used by half the world. Our current range of chromogenic media is unsurpassed (20 dehydrated media and about 100 ready-to-use media), and some of them are still unique and we are the sole manufacturers.

In MICROKIT we offer you all the culture media you need, with the guarantee of a manufacturer that has about a quarter of a century doing what he does best: making your job easier in microbiology laboratories whilst achieving the most rigorous quality standards.
